

YPHOS WiFi Controller

YHB-WiFi SPECIFICATIONS SHEET

The YPHOS Wi-Fi Controller is the central intelligence behind modern underwater lighting. Engineered for reliability in demanding marine environments, it connects effortlessly to onboard WiFi networks or it creates its own isolated WiFi network while maintaining the link with every YPHOS fixture.

Its compact, marine-ready and splashproof design allows discreet installation, while advanced electronics ensure smooth dimming, instant response, and long-term operational stability. From a single light to a complete yacht illumination system, control remains effortless, full of options, and beautifully simple.

- Remote control via Smartphone (iOS or Android)
- Marine-grade
- Antenna Included
- Connects to existing WiFi or creates new network
- Status LEDs
- Simple & Fast installation
- Can be added to existing systems
